

Sales conversations grounded in evidence

For B2B sales teams, agencies, and founders preparing for their next conversation.

Actual demo workspace. AI-generated research requires source review.

The idea

Public information is scattered. Sellers still need to connect it to their offer. InsightIQ brings that research into one workspace and turns it into a cited conversation brief.

How it works

- 1 Add a prospect, offer, and goal.
- 2 Discover public sources.
- 3 Extract source-linked claims.
- 4 Review the brief and citations.

Built as a complete research workflow

Next.js dashboard and NestJS API, with PostgreSQL storing data and jobs. Tavily discovers public sources. A Python worker uses Qwen through DashScope and LangGraph to extract evidence and generate briefs. Key-signal checks preserve the evidence trail.

What sellers receive

Meeting prep: talking points, questions, objections, and next steps.

Outreach: personalized drafts tied to the seller's offer.
